

PIG FARMING

RETIREMENT PLAN.

*Set up a good
income stream
for yourself
in your
retirement.*

HEIMDALL
PORK

powered by byobafrica ltd.

We are here to encourage you to go into the pig business.

With our proposed plan, you will be able to start your pig business with a small amount (**which you can pay in instalments**) and we will help you to grow it into a proper farm of your own which will begin to earn you at least N20 million per annum as gross income within five years.

This is an ideal plan for anyone who is planning retirement or who just wants a good business to invest into.

The demand for pork far exceeds the current local supply by over 60%. There is a massive market that you can tap into.

Our strategy will enable you to enter the pig business with low risk while learning how to become an independent pig farmer.

You simply rent a pen in our farm and stock one young female. She will get pregnant within a short while and your farm will begin to grow. We do it all for you.

HERE IS OUR RENTAL PLAN

1. Rent one pen.	50,000.
2. Buy one young gilt.	90,000.
3. Cleaning and care.	100,000.
4. Vet fees.	60,000.
5. Feed and drugs.	200,000.

TOTAL :- 500,000.

OUTRIGHT PAYMENT :- N500,000.

You can also make the payment in instalments...

Inflation has been factored in.)

1st Payment N200,000.
2nd Payment N110,000.
3rd Payment N110,000.
4th Payment N110,000.

Total :- N530,000.

RETURNS.

While you are on this rental plan, you will be paid fixed annual payments as follows.

Year 1. N300,000 .
Year 2. N400,000 .
year 3. N600,000 **or** 14 young pigs.2 male 12 female along with 600kg of feed.

The maximum term for the rental plan is 3 years. You will have to get your own permanent location. (we will assist you).

When you are moving out of our rental spaces to set up your own farm, you will get the following to set up your own farm fully :-

(**NOTE** : you can only leave after the second year)

- 1.** If you are leaving after two years, you will get 7 young pigs. 6 female and one male and 300kg of feed.

- 3.** If you are leaving after three years, you will get 14 young pigs. 12 female and 2 male and 600kg of feed.

Please note that in any year you are leaving, you can not get the cash returns **and** the pigs.

You have to pick one of the options.

While you are in our rental plan we have set up some fail-safes or cushions to make your entry into pig farming less risky.

- A.** If your gilt dies within the first year, it will be replaced at no cost to you.
- B.** If your gilt is a bad mother, it will be replaced. (Some female pigs actually eat their own young at birth or cause their premature deaths).
- C.** You will get monthly updates about your farm if you are unable to visit. This may include pictures, possibly videos too and short reports. We will do our best to carry you along.
- D.** You can visit the farm at any time that you wish. You must give 48 hours notice so that we can make arrangements because of bio security. **This is important. Please take note.**
- E.** You can not exit the program before the end of the second year. If you decide to exit the plan before the end of one year, you will only get 50% refund.

(the project timing begins to count 30 days after your payment is received for the rental plan.)

With this basic set up plan which you start with **14 pigs**, and our guidance, you will quite easily build a pork business that will have more than 300 pigs and you will be selling at least 20 units every month and earning far more than **N20million** annually as gross revenue within just five years of operation.

This is a very feasible and sustainable way to plan your retirement.

Pig farming works well if done properly. If you have any questions or require further clarifications, please reach out To us.

Here is one of the most popular questions that people ask us.

Question :-

Don't you think it is unrealistic to say that you can build a business of N20 million gross annual income in just five years from an initial investment of just N500,000 ?

Answer :-

Until a few years ago, we also did not think it possible until we had an experience of how pig farming was practiced in China which is currently the leading producer of pork in the world with an average of 56 million metric tonnes produced every year.

(Nigeria produces far below half of one million tons) They are far ahead of what pig farmers are doing here in Nigeria. They run their farms like factories with production targets which they usually even exceed. Optimal production is the focus. Reach out to us and we will send you a PDF copy of a detailed scenario which will show you what is possible in properly organised pig farming..

Let us assume that one sow gives birth to only five at a time and does so twice a year.

Year 1. She gives birth to 5 twice a year = 10 piglets.

At maturity, keep four females and sell the rest.

Year 2. You now have 5 females. They give birth to 5 twice. = 50 piglets. Sell 35 keep 15 females to be added to the existing 5 to make a total of 20 producing females.

Year 3. 20 females are now available. They give birth to 5 twice. = 200. Sell 170 keep 30 females to add to your 20.

Year 4. 50 females now available. They give birth to 5 each twice. = 500. The price of one full grown pig 100kg is currently about N280k but we will use 150k for this scenario. **How much is 150k x 500 ? Please check it by yourself.** It is important that you check it yourself to understand the importance of this sector which is currently being overlooked because of local superstition about pork.

PLEASE NOTE !

This is just an illustration of what is possible. Running a farm is more complex than the simple figures that are presented here. Breeding selection, Treatments, Feeding, Waste management, Bio security, Accounting etc.. But the presented outcomes are very feasible because the pigs will most likely give birth on average to more than 10 per capita. Some give birth to 15 or even more.

There is a difference between subsistence farming and agribusiness. Nigerians must move from just farming to agribusiness.

VISION :- *become a major pork source in Africa by 2030.*
